Jump High - Game Design Document

Akzhol Nurtai, Game Development Fundamentals, Narxoz University

1. Title and pitch

Jump High. A 3D platformer where you jump over islands, collect all coins to open the door and at the end fight a boss.

2. Genre and platform

3D platformer. Android and iOS. Landscape only.

3. 2D or 3D

3D. The hero is a rigged character from Mixamo with Idle, Run and Jump animations. The camera follows the hero from behind.

4. Core loop

Run and jump → collect coins → avoid obstacles → open the door → next level.

The player has 3 hearts and 60 seconds for a level. If hearts or time end, the level starts again.

5. Controls

Button	Where	What it does
Joystick	bottom left	move
JUMP	bottom right	jump
FIRE	next to JUMP	shoot
II	top right	pause (Resume, Restart, Menu)

6. Content

- **Level 1:** islands and two bridges in an S shape. Obstacles come one by one: red blocks, walking blocks, bouncing blocks, a rising wall and a spinning bar. 7 coins.
- **Level 2:** same style but a different route: bridge to the left, long bridge to the right with a moving platform over a gap. All obstacle types are mixed. 8 coins.
- **Level 3 (Boss):** an arena with pillars. The boss has 10 HP, shoots fireballs and drops rocks. You shoot him with FIRE.
- Bombs fall from the sky. Hearts give 1 HP back.
- Screens: Main Menu, HUD, Pause, Win.

7. Art and sound

Simple low-poly style. Every level has its own sky color: blue, sunset, red for the boss. Red objects are dangerous. Hero from Mixamo, music and sounds from Pixabay.

8. MVP (week 15)

- Menu, 3 levels and Win screen work on a phone.
- UI looks right on 16:9, notch phone and tablet.
- Enemy AI, saving progress, sound settings and effects.

9. Cut list

- Multiplayer and leaderboards
- Shop and ads
- Character skins
- More than one boss
- Portrait mode

10. Plan

Week	What will be ready
9	GDD, GitHub repository, Menu, HUD and Pause screens
10	Enemy AI (patrol and chase)
11	Saving (levels, best time, settings)
12	Sound (mixer, music and effects volume)
13	Effects and Android build

Roles: I work alone until week 14.
